

High-quality multifunctional Automatic Biscuit Production Line

Biscuit is a kind of convenient food that has been spread for a long time. It is prevalent for its easy preservation and crispy taste. There are countless varieties such as peach crisps, cookies, soda biscuits, sandwich biscuits, alphabet biscuits, animal biscuits, etc. Most of them change patterns based on crisp or tough biscuits. Automatic Biscuit Production Line from feeding to molding, baking, oil injection, cooling, residual material recovery, etc., all processes are automatically completed by mechanical and electrical integration and can produce a variety of crispy and tough fancy biscuits on the domestic and foreign markets.

Automatic Biscuit Production Line

This series of the Automatic Biscuit Production Line is equipped with complete supporting equipment, including sugar salt spreader, oil spray machine, syrup spray machine, multifunctional flour spreader, trough type cake processor, differential speed cake processor, nut slicer and other auxiliary production equipment, providing mechanical support for the production of various flavor biscuits. All kinds of machinery are equipped with frequency conversion speed regulation, all kinds of machinery cooperate with tacit understanding, truly realizing automation.

The main features of Automatic Biscuit Production Line:

1. Biscuit forming machine can be directly connected to the production line or manually placed into the product.
2. Biscuit manufacturing equipment designed according to product characteristics to avoid product extrusion. When the product is in a fault state, remove unqualified equipment without stopping to ensure continuous and stable production and packaging processes.
3. Multifunctional biscuit machine adopts multi-frequency control, servo drive control, easy operation, stable operation, high control accuracy, and low energy consumption.
4. Biscuit Production Line adopts stainless steel and aluminum alloy structure, humanized design, easy installation, maintenance, and maintenance.
5. Automatic soft and hard biscuit production line automatic feeding: centering, positioning, distribution, packaging.

Technical parameters of Automatic Biscuit Production Line:

Model	DL-250	DL-400	DL-600	DL-800	DL-1000	DL-1200
Handling capacity?KG/H?	100	250	500	750	1000	1250
Total length?mm?	29600	64500	85500	92500	125000	125000
Baking temperature???	190-240	190-240	190-240	190-240	190-240	190-240

Power ?KW?	65	190	300	380	700	830
Weight ?KG?	6000	12000	20000	28000	40000	45000

The Automatic Biscuit Production Line can meet a variety of needs. The weight of the biscuits can be customized, or a higher capacity production line can be provided according to customer requirements and factory scale. There are many biscuit line models specifications, which can meet the needs of different manufacturers and bring many conveniences to customers.

The workflow of Automatic Biscuit Production Line:

Dough making--->Biscuit forming and baking--->Injector--->Cooling-->Biscuit stacking machine--->Biscuit sandwich machine Biscuit finishing table--->Final packaging machine

The entire process of this new series of biscuit production lines is an assembly line work, including material feeding, pressing, forming, waste recycling, material distribution, toast, oil injection, and cooling. By changing molds and process formulas, high-end biscuits that are popular on the market include butter biscuits, biscuits, thin biscuits, multi-dimensional soda biscuits, and animal biscuits, biscuits, vegetables, biscuits, etc., can be produced.

Sample Cookies

[Automatic Biscuit Production Line](#) meets the requirements of domestic and foreign markets and has won wide recognition and praise from customers. High-quality multi-function is its main feature. Besides, it has many other advantages. This biscuit forming machine is very popular and stands out by its own benefits. If you also need such a device, then choose it and guarantee value for money!
