

What are the characteristics of rice straw?

Straw is an important product in both developed and developing countries. In recent years, the food service packaging industry has developed rapidly. While bringing convenience to people's life, more and more discarded plastic straws and similar products begin to burden the environment. The application of rice straws has gradually entered the vision of the group. Rice straws have a very large market prospect.

What are the characteristics of rice straw?

Straw is an important product in both developed and developing countries. In recent years, the food service packaging industry has developed rapidly. While bringing convenience to people's life, more and more discarded plastic straws and similar products begin to burden the environment. The application of rice straws has gradually entered the vision of the group. Rice straws have a very large market prospect.

1?Rice straw production line

All countries are trying to develop environmentally friendly products. The rice straw production line developed by SHANDONG LOYAL INTELLIGENT MACHINERY CO., LTD. has been exported to overseas and has been greatly recognized locally. It is a better choice for you to invest in equipment. Our company is responsible for door-to-door installation and commissioning and imparting relevant production technology.

The production process of rice straw is not complex. The enterprise has realized automatic and large-scale production through the rice straw production line.

Use rice straw to drink drinks, and the taste of drinks will not be affected. Straw can be eaten directly and tastes hard, which is somewhat similar to rice and rice. The rice straw can soak in hot drinks for two to three hours and last longer in cold drinks.

2. Features:

Compared with ordinary straw, the products produced by edible rice straw processing production line have unique process, reasonable configuration, high degree of automation, stable performance, environmental protection and no pollution. They can also be eaten directly after use.

3. Production process

FLOW CHART:

MIXER?SCREW CONVEYOR?SINGLE SCREW EXTRUDER WITH COOLING

SYSTEM?COOLING CONVEYOR ?CUTTING MACHINE?HOISTER?DRYING
MACHINE?COOLING CONVEYOR

The rice straw production line produced by our company mainly adopts advanced expansion and extrusion technology, which is convenient for staff to operate and in line with environmental protection standards. Similarly, our equipment covers a small area and has perfect supporting facilities. No matter what kind of factory, the equipment can be operated and used. If you have any other questions, please contact us.
