French Customer Soya Badi Making Machine Case

Soya Badi Making Machine is our new type of extruder specially designed for plant protein extrusion. It has been manufactured based on our rich experience in the food industry for many years. The products have been sold all over the world and are constantly improving.

Soya Badi Making Machine is our new type of extruder specially designed for plant protein extrusion. It has been manufactured based on our rich experience in the food industry for many years. The products have been sold all over the world and are constantly improving. A large food processing company in France contacted us. They have needs in this regard, so they want to buy this equipment.

Soybean manufacturing equipment

This Soya Badi Making Machine is developed and manufactured based on our experience in market demand. The production line uses soybean powder, defatted soybean powder, peanut powder, etc. as the main raw materials. After grinding, mixing, squeezing, cutting and drying, the coarse powder becomes soy protein/soybean meat in various shapes, such as chunks, slices, chopped, etc. Soy Badi production equipment
Has become a series of products that can meet the needs of different customers.

Advantages of Soya Badi Making Machine:

1. Soybean manufacturing equipment has excellent performance and high quality of finished

products.
2. Stainless steel, the Soy Badi production line has reasonable design and high degree of automation.
3. The screws are made of alloy steel, with building block system structure and self-cleaning function.
4. With the characteristics of oil absorption, water absorption, oil absorption, oil absorption, etc., it can be used in all walks of life.
5. Soy food manufacturing machine uses the latest production equipment, based on market demand and the basic situation of the country, and is developed based on advanced equipment.
6. The Soy protein making machine uses soybeans and peanuts as raw materials to make round protein water into a chain and reorganize, and then form a sheet fiber structure by grinding, mixing, conditioning, high temperature, high pressure and high cutting.

Examples of Soy Products

Soya Badi Making Machine uses defatted soybean/peanut flour as raw material. Through high temperature and high pressure, the materials can be reorganized and formed into different shapes, such as tubes, rods, balls, blocks, etc. It can produce more concentrated and healthy protein, and it has become one of the most popular soy protein extrusion equipment in the world.
The final product of Soya Badi Making Machine has many characteristics, rich fiber texture, delicious meat, no cholesterol and animal fat. Therefore, it is widely used in the meat industry, fast food production, quick-frozen food production and various vegetarian snacks and foods, and is a good helper for food processing companies.

French customer visiting

Under our leadership, several customers visited our factory and learned about our soybean manufacturing equipment, vegetarian meat making machine, fried food production line, vegetable washing machine and other equipment. Finally, they bought two of our Soya Badi Making Machines, for which we provide professional pre-sales and after-sales services, are committed to strict quality control and thoughtful customer service. Our experienced staff are always available to discuss customer requirements. And to ensure that customers are completely satisfied.

If you also have any new ideas or concepts for our products, please feel free to contact us. We sincerely look forward to establishing cooperative relations with customers at home and abroad and creating a better future with us?
