

Industrial Vegetable And Fruit Washing Machine For Sale In Brazil

Industrial Vegetable And Fruit Washing Machine For Sale In Brazil by Shandong Loyal Industrial Co.,Ltd. , we provide latest information about the products regularly.

In October 2021, a Brazilian customer contacted us through the introduction of an old customer. He is from Brazil and is a local farmer in Brazil, producing vegetables and fruits by himself. Our company has nearly 10 years of experience in exporting to the Brazilian market. He owns large rural areas, and on his farms, he produces vegetables and fruits by himself. Currently the customer sells all production in natura. But this year he would industrialize, adding value to the product. Customer here has a large market. He wants to gradually invest in food processing.

Our vegetable and fruit washing machine has a good manufacturing process, and the vegetable washing machine can remove dust, chemical pesticide residues, insect eggs, etc. on the surface of vegetables, fruits, and herbs. Washed vegetables and fruits look clean and beautiful and can be eaten directly or processed into other foods.

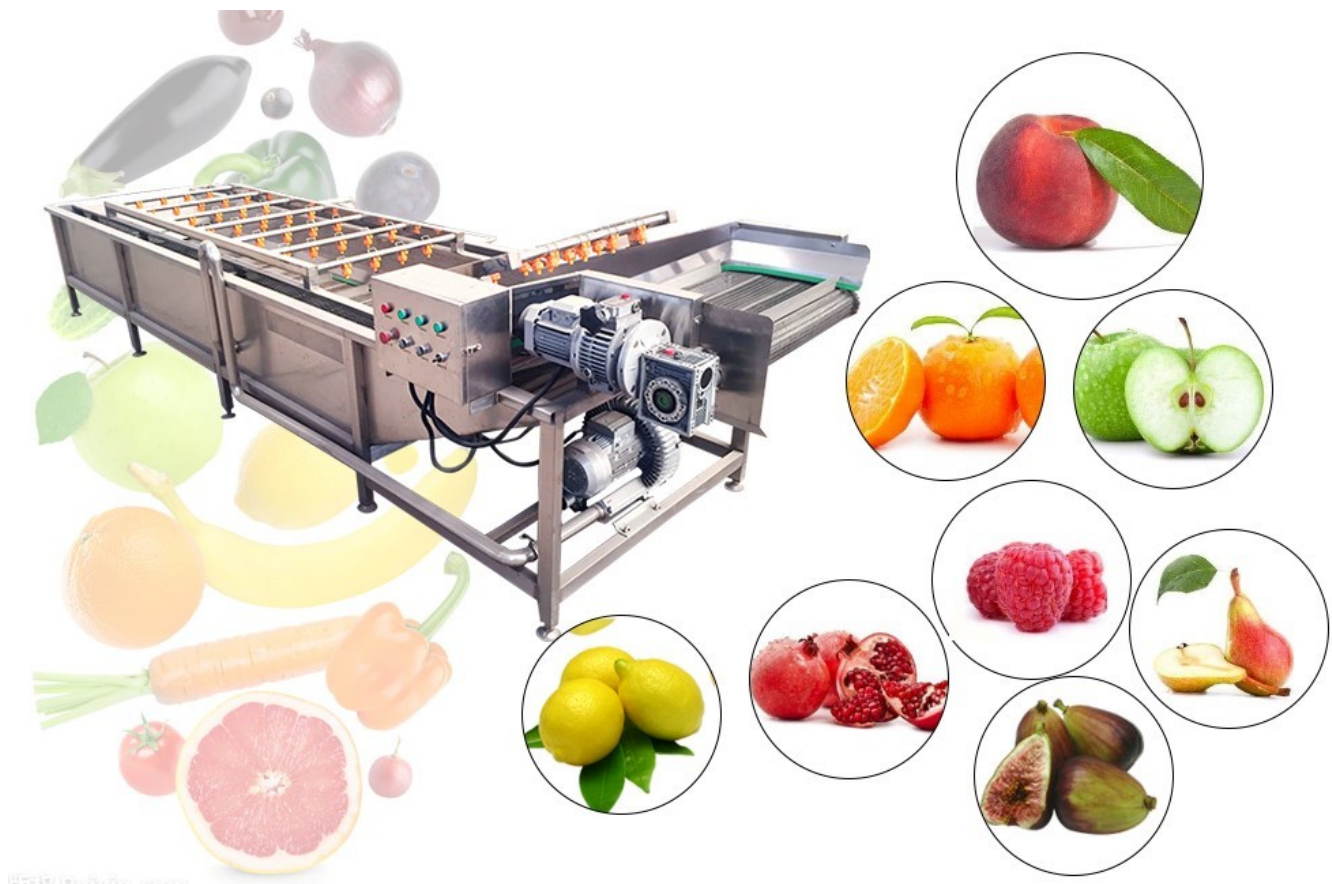

We actively communicate and communicate with customers, deal with customer problems, and help Brazilian customers to familiarize themselves with the technological process and steps of vegetable and fruit cleaning production lines. And we provide customers with a 1800kg vegetable and fruit cleaning production line according to their annual output of vegetables and fruits. Our engineers also design the production line layout according to the Brazilian customer's workshop size.

Industrial Fruit And Vegetable Washing Machine Operation Manufacturing Process

The fruit and vegetable washing machine adopts water bath foam washing and high pressure jetting. During the release process of the material, through the tumbling action of the bubbles in the water, the material produces an irregular and strong turning movement in the water, and the attachment on the surface of the object to be cleaned is effectively separated through the movement of the material. Coupled with high-pressure pneumatic spraying, it simulates the basics of manual cleaning action.
