

Successfully Installed And Debugged Nepal 100kg/h Panko Bread Crumbs Production Line

After we shipped the Panko Bread Crumbs Production Line to the Nepali bread crumb customer, we actively provided the electrical schematic diagram of the machine and informed the customer of the tools, water and electricity required for preparation. The customer also made preparations for the Panko Bread Crumbs Production Line factory through the factory layout diagram we provided in advance.

After a period of sea transportation, the customer successfully received the Panko Bread Crumbs Production Line.

At the same time, we also sent professional engineers to the customer's factory to conduct on-site Panko Bread Crumbs Production Line installation and debugging and worker training. After 2 weeks, our engineers successfully completed the installation and debugging of the Panko Bread Crumbs Production Line.

Thrilled to share the fantastic achievement of our team in successfully completing the factory electrode-curing bread crumbs production line debugging for Nepal customer!

A huge shoutout to the professional engineer who poured their expertise, hard work, and determination into making this project a triumph.

Your efforts have not only met but exceeded expectations.

Let's continue pushing boundaries and reaching new heights together!
