

## **Discover The Secret To Perfect biscuit production line: biscuit production line Recipes**

**If you want to know more story about LOYAL brand? here can help you - <https://www.facebook.com/foodmachineloyal>**

Have you ever wondered how a beautifully packaged, crispy biscuit can be transformed from a handful of ordinary flour into a delicious snack on the table? Behind this is the result of the silent operation of a modern biscuit production line.

The biscuit production line is an important bridge for converting raw materials into finished products. It usually includes multiple links such as batching, mixing, tableting, molding, baking, cooling, and packaging. Each process contains a combination of science and technology. For example, the baking link not only affects the color of the biscuit, but also directly determines its crispness; and the design of the cooling system is related to whether the biscuit can be fully formed and maintain its taste.

## The history of biscuits: from ancient military rations to modern snacks

Biscuits, as a portable and long-lasting baked food, have a history of thousands of years. Its evolution not only reflects the development of human food culture, but is also closely related to scientific and technological progress and social changes.

### 1. Ancient origins: dry food and survival needs

The earliest "biscuits" can be traced back to ancient Egypt and Persia (about 2000 BC), when people ground grains and baked them into hard bread as dry food for soldiers and business travelers.

The "Buccellatum" of the Roman army is a hard unleavened bread that is easy to carry for a long time and is considered to be the prototype of modern biscuits.

The "Hu Biscuits" of the Tang Dynasty in China (7th-10th century) and the "Ka'ak" in the Arab region are also similar to biscuits, often flavored with spices or honey.

## **2. The Age of Exploration: The Globalization of Biscuits**

In the 15th-17th century, the European Age of Exploration emerged, and biscuits became the standard food for ocean-going ships because of their long-lasting storage. The British Navy even rationed "Ship's Biscuit" (also known as "hard biscuit") to its crew members according to the standard, but because it was as hard as stone, it was often jokingly called "tooth destroyer".

Colonial expansion promoted the spread of biscuits to America and Asia, and integrated them with local diets.

## **3. Industrial Revolution: The Revolution of Mechanized Production**

In the 19th century, the Industrial Revolution gave birth to large-scale production of biscuits:

In 1831, Britain invented the biscuit forming machine, ending the era of manual cutting.

In 1891, the American "National Biscuit Company" (later known as "Nabisco") launched Oreo, which became a classic.

The popularity of sugar and oil has turned biscuits from "survival food" to "casual snacks", giving birth to crispy butter biscuits, sandwich

biscuits, etc.

#### **4. 20th century to present: Diversification and health**

War and innovation: During World War II, compressed biscuits became military rations; the post-war economic recovery promoted snack consumption, and chocolate biscuits and wafers became popular all over the world.

Health trend: After the 21st century, sugar-free biscuits, whole grain biscuits, protein biscuits, etc. cater to health needs, and environmentally friendly packaging is on the rise.

### **Conclusion: Small biscuits, big history**

From the coarse military rations of ancient Egypt to the dazzling array of modern snacks, biscuits are not only a product of technology, but also a witness to the exchange of civilizations. In the future, with the development of food technology, biscuits may continue their delicious legend in a more low-carbon and personalized way.

The next time you bite off a biscuit, think about it - it is a "slice of history" that has traveled through thousands of years!

From manual operation to fully automatic biscuit production lines, technological advances have made biscuit making more efficient, hygienic and stable. But no matter how advanced the equipment is, what really makes biscuits "delicious" is the control of every detail and the insistence on food quality.

## **Biscuit production line flow chart**

Flour Mixing---Biscuit Forming machine---Oven---Oil Spraying  
---Cooling Conveyor---Biscuit Stacking ---Biscuit Packing

The production capacity of biscuit making machines is hot in the market. We have small and large biscuit machines for you to choose from.

A fully automatic biscuit production line consists of several integrated

systems, each designed to handle a specific stage in the manufacturing process with precision and consistency. Understanding these core components is essential for manufacturers aiming to achieve high-efficiency biscuit production.

## **The function of biscuit production line**

1.Mixer: Dough mixer is a machine that mixes flour with water or other ingredients into dough. It is widely used in making dough for various pastries, biscuits, bread, steamed buns, etc.

2.Biscuit Forming machine: ?1?Crispness molding: put the mixed flour into this machine, and it can be formed into biscuit embryos through roller printing, and then put into the oven to make various medium and high-end biscuits.

?2?Toughness molding: put the mixed dough into this machine, press the skin through three rollers, and then roll it into biscuit embryos through the roller cutting mold, and put it into the oven to bake medium and high-end tough biscuits.

3.Oven: Suitable for baking all kinds of biscuits. Use electric heating, temperature zone control, temperature of each temperature zone can be set in advance, uniform temperature in the temperature zone, use high-quality insulation materials, good insulation performance, high thermal efficiency. Temperature control system, automatic temperature control and constant temperature, flexible operation, high safety performance.

4.Oil Spraying: Spray oil on the surface of biscuits coming out of the baking oven to make the color, aroma and taste of the biscuits more distinctive and improve the grade of the biscuits.

5.Cooling Conveyor: This equipment fully cools the biscuits before they are conveyed to the packaging machine to ensure the quality of the biscuits after packaging and extend the shelf life.

## 6. Biscuit Stacking: sort biscuits and pick out unqualified products

In summary, each element of the production line—from dough mixing to cooling systems—plays a pivotal role in producing high-quality biscuits at industrial scale.

If you want to make sandwich biscuits, there are sandwich machines waiting for you to choose. If there is not enough space, you can also choose a turning machine.

# Technical specifications of biscuit production line

Model	Output
LY-320	100-150kg/h
LY-400	150-200kg/h
LY-600	400-500kg/h
LY-800	600-800kg/h
LY-1000	1000kg/h
LY-1200	2000kg/h

## Layout for the biscuit production line

Our machines can be flexibly arranged according to the size and dimensions of the factory. We can also customize the size of the machine according to the data you provide.

**Quickly replenish energy:** Biscuits are rich in carbohydrates and are a good helper for quickly replenishing physical strength when going out, studying or working.

**Easy to carry:** small and easy to store, not easy to break, suitable as a portable snack for travel, commuting or children going out.

**Rich flavors to meet various preferences:** from milk, chocolate to whole wheat, nuts, there is always one for you.

**More delicious with drinks:** whether it is coffee, milk or tea, it has a bonus effect when paired with biscuits, making the simple afternoon time warmer.

**Emotional comfort:** The sweet and crispy taste can bring a little psychological satisfaction and relieve minor stress or fatigue.

Of course, enjoying in moderation is the key to health. Eating some

biscuits properly not only fills your stomach, but also a gentle comfort in life.

## Advantages of biscuit production line

Modern biscuit production lines play an important role in the field of food manufacturing. Their advantages are not only reflected in production, but also in the stability of quality and the standardization of processes. First of all, the entire production line connects the links of dough mixing, forming, baking, cooling and packaging in an orderly manner, with clear

processes and reduced human intervention, so that the shape, taste and degree of maturity of the biscuits are more consistent.

Secondly, the equipment operates stably and can operate continuously for a long time, greatly improving production efficiency and meeting the needs of large-volume orders. The operation method is simple and clear, which is convenient for worker training and daily management.

In addition, through refined process control, the production line can better control the baking time and temperature of biscuits, so that each batch of products has ideal crispness and color, and improves the overall product quality and eating experience.

In short, the existence of biscuit production lines is not only for speed, but also to control the deliciousness and unity of each biscuit, so that traditional flavors can enter thousands of households in a more reliable way.

We sincerely invite industry partners to explore the infinite possibilities of biscuit manufacturing and work together to create a new era of smart baking.

## Recommended Company

Shandong Loyal Industrial Co.,Ltd. Is a Manufacturer Of Snacks Extruder Machine , Industrial Microwave Oven , Corn Flakes Production Line , And a Standing Director Of China Food And Drying Equipment Industry Association.

The Self-developed Twin-screw Extruder And Single-screw Equipment of Shandong Loyal Machinery Have Been Used In Production: Puffed Snack Food, Breakfast Cereal Corn Flakes, Fried Pasta, Bread

Crumbs, Fruit Chips, Baby Food, Textured Soy Protein (tsp) Food, Fish Feed And Pet Food. a Variety of Snack Production Line Supporting Products.at The Same Time, The Batching, Drying, Flaking, Baking, Frying And Spraying Equipment Matching The Twin-screw Extrusion System Have All Achieved Independent Design And Production.

Our Extrusion System Is Widely Used In: Puffed Snack Foods, Breakfast Cereals, Vegetable Protein Meat Products, Soy Based Nutrition Bars, Reconstituted Rice, Grain Nutrition Powder, Modified Starch, Starch-based Sticky Music Children's Educational Toys, Degradable Starch-based Packaging Filling Materials, Bread Crumbs And Other Food Additives, Pet Food, Aquatic Feed, Biology And Chemical Industries.

### Customer-specific Food Processing Plant Project Solutions

As one of the leading manufacturers of food processing equipment, we are always searching for new solutions that benefit our snack food customers. Our experienced frying engineers always find the optimal solution for your industrial batch and continuous frying system line application. That's why we also develop, design and produce custom fried snack production line.

Close collaboration with our customer is important to us even in the early development phase. No matter what the special requirements of instant noodles production line, snack food extruder machine, pasta production line application, we can develop a custom made food processing equipment to match your needs.

Loyal have a unique and efficient industrial continuous frying equipment for snack food extruder machine that provides the right crunch and desired moisture level.

The Industrial Microwave Sterilization Defrosting Drying Machine can be designed as a dry powder dosing system and a wet slurry dosing system as required.

Some snacks can also be fried according to taste requirements, and we also provide Fried Snack Production Line for the processing and packaging of fried extruded snacks.

Loyal Food Production Line meet the needs of customers to obtain snack food that meet the needs.

In ovens or drying units, electric or gas can be used as heating sources.

Loyal have a unique and efficient industrial continuous frying equipment for snack food extruder machine that provides the right crunch and desired moisture level.

The Industrial Microwave Sterilization Defrosting Drying Machine can be designed as a dry powder dosing system and a wet slurry dosing system as required.

Some snacks can also be fried according to taste requirements, and we also provide Fried Snack Production Line for the processing and packaging of fried extruded snacks.

## About packaging and after-sales service

Packing: Plastic Film Suitable For Ocean Carriage

Technical Support: The customer can inform machine related problems to us via telephone, email or fax. All information will be recorded and will be reported to the After-sale Service team. Meanwhile, the sales person will be tracking the case until problem solved.

Service Team: We have a professional After-sale Service team

including 10 professional engineers with at least 6 years working experience. They can handle technical consultation about manufacturing process, maintenance, fault diagnosis and troubleshooting, etc.

After-sale Service available : 1. Check & test before delivery  
2. Instruction for installation 3. On site commissioning 4. Repair & maintenance

After the receipt the advanced payment, we will provide allocation chart at the buyer's . When effect the shipment, we'll provide operation manual, etc. in English.

Biscuits may seem simple, but they embody the wisdom and technology of the food industry. An efficient biscuit production line not only increases production, but also ensures food safety and product consistency. This is the charm of modern food manufacturing - using technology and craftsmanship to give each biscuit stable quality and warm taste.

In the future, we hope that more people will understand the story behind this, and let more people understand that each biscuit is not just a snack, but also a journey where industry and people meet.
